

# BSc (Hons) Environmental Management

**On-line, 2yr part time or 1yr full time course**

## About Environmental Management

There is an ever increasing focus for organisations to manage environmental issues and factor environmental requirements into their decision making processes. This is driven by legislative compliance, commercial development, technical operations and Corporate Social Responsibility (CSR). Moreover, there is a need to factor environmental criteria into all stages of Project Development. This honours degree is designed for those who want to take an active role in Project Management or Project Development, focusing on environmental requirements. It is suitable for those who require involvement in the environmental management affairs of an organisation or who wish to develop their knowledge, skills and competence base in this field.

As part of the course students will undertake field trips to observe the practical application of the environmental management topics.

**This course is available on a 1 year full time or 2 year part time basis.**

## About the Programme

The programme will be delivered online via lectures, programme materials, innovative learning, web-links and assessments. There will be up to two workshops per semester, where the students will undertake teamwork, lectures and/or site visits to facilities or organisations which are relevant from an environmental management perspective.

## After you Graduate

Employment prospects may exist in both the public and private sectors in projects of all types and sizes. This is particularly the case where project

success factors, or contract/tender award criteria, relating to the environment need to be satisfied or where an organisation seeks a qualified professional to take on the role of environmental manager.

You will also be better informed to work in a project management/development capacity or environmental management role in your own workplace. Finally, you can apply for a distance learning Level 9 Post Graduate Diploma in Environmental Protection at IT Sligo.

## Entry Requirements

Ordinary Degree (Level 7) in a relevant science discipline. Applicants with other qualifications and/or with relevant experience will also be considered. It is also envisaged however, that applicants with different backgrounds can successfully complete the programme, subject to assessment of other recognised qualifications, and/or recognised prior learning and/or relevant work experience. These candidates will be interviewed for suitability and be subject to prior approval by the Programme Board.

## Modules (credits awarded)

Full time students take all modules in 1 year. Part time students can choose which modules they take in Year 1 and carry out the remaining modules including the project in Year 2. All modules run with the same format each year.

Modules not only deliver the theory and principles but also the practical application working with experts in their relevant field.

Semester 1	Credits	Semester 2	Credits
Principles of Project Management	10	Project Development	10
Natural Resource Management	10	Cleaner Production	10
Project	10	Project (continued)	10

*I.T. Sligo reserves the right to change the programme design throughout the duration of the course.*
